

# ***Inclement Weather / Lightning Plan of Action***

## ***National Shooting Complex***

At the first sign of an approaching storm, local Doppler radar will be monitored for direction and severity of the storm. At the same time shoot management will be strategically positioned so as to monitor the approaching storm for lightening and any other potential dangerous elements.

At first sight of lighting (by and or relayed to any shoot staff) a cease fire will be called immediately via PA system and by shoot management to each field where PA is not available. All fields will be cleared of both participants and staff, with all taking cover in available areas; ie Club House, Vendor Buildings, vehicles, etc.

Shoot management will continue to monitor lightning strikes, starting a new time clock with each observed strike. At the duration of 20 minutes with no strikes, shoot management will begin the process of returning participants to the field(s) to continue with shooting. By starting this process at 20 minutes, total elapsed time from last strike until shooting begins a is anticipated to be 30+ minutes.

The above process will be repeated for any and all storms / lightning strikes observed.

In the event of any other dangerous elements of an approaching storm, such as extremely high winds / tornado or hail, the same cease fire and field evacuation procedures as above will be implemented as soon as the danger is realized.
